By the way, ISO 8015 you linked to is a very old standard, in the UK and most places in the world other than the US the latest dimensioning and tolerancing standard is ISO 1101 - 2017. A "two point inspection" is simply done with a dial or digital caliper where the device contacts two opposed surface elements to obtain a distance or size.

used when the fundamental tolerancing principle in accordance with ISO 8015 is used and indicated on the drawing (see clause B.1). 3 Normative references The following standards contain provisions which, through reference in this text, constitute provisions of this part of ISO 2768. At the time of publication, the editions indicated were valid.

General tolerances

For drawings which do not have notation "Tolerancing ISO 8015", the default case for tolerances of the ISO system of limits and fits is the type "Two-point size and mating size". This means that form was controlled by indication of size. This has been changed with this standard into the default rule:

Variations on dimensions without tolerance values are according to "ISO 2768". All tolerance limits are given in mm. ISO 2768 and derivative geometrical tolerance standards are intended to simplify drawing specifications for mechanical tolerances. ISO 2768 is mainly for parts that are manufactured by way of machining or removal of materials.
